

What will Oman's new energy policy mean for the energy sector?

The move - a first in Oman's power sector - will help support the large-scale adoption of renewable energy resources for electricity generation, as well as accelerate the decarbonization of the electricity sector, according to a key executive of the state-owned entity - a member of Nama Group.

Can new energy sources be integrated into traditional ship power systems?

The integration of new energy sources into traditional ship power systems has enormous potential to bring the shipping industry in line with international regulatory requirements and is set to become a key focus of ship-related researches in the immediate future.

How can energy storage improve the penetration of intermittent resources?

Energy storage can increase the penetration of intermittent resources by improving power system flexibility, reducing energy curtailment and minimising system costs. By the end of 2018 the global capacity for pump hydropower storage reached 160 GW whereas the global capacity for battery storage totalled around 3 GW (REN21 2019).

How can a hybrid energy storage system reduce load fluctuations?

For example, in order to reduce the impact of load fluctuations on the system efficiency of a full-power ship, Alafnan et al. used a hybrid energy storage system consisting of batteries and superconducting magnetic energy storage devices to maintain the bus voltage stability.

Are ship microgrids a new energy source?

In summary, current studies on microgrids mainly focus on terrestrial new energy generation systems, whilst the research on ship microgrids is insufficient. This research status has become one of the restriction factors for the wider adoption of new energy sources in ships.

How do energy storage systems work?

Energy storage systems currently in use around the world save energy in a variety of forms - chemical, kinetic, thermal and so on - and convert them back to electricity or other useful forms. In Pumped Hydroelectric Storage, for example, the system consists of two reservoirs maintained at different heights.

Energy storage system (ESS) is a critical component in all-electric ships (AESs). However, an improper size and management of ESS will deteriorate the technical and economic performance of the shipboard microgrids. In this article, a joint optimization scheme is developed for ESS sizing and optimal power management for the whole shipboard power system. Different from ...

The global shipping industry faces huge pressure to reduce its greenhouse (GHG) emissions due to the International Maritime Organization (IMO) has introduced strict regulations to decrease GHG emissions from

ships. New energy sources can provide a solution for green shipping because they have the advantages of abundant, renewable and clean. This ...

All of these fuels can benefit from energy storage for efficiency and viability; we believe that in the near future, all commercial ships will have a battery room to supplement other energy solutions.

In this scope the paper is structured as follows; energy storage and power generation technologies that can be used in ship energy/propulsion systems are presented in sections 2 Energy storage systems suitable for electric and hybrid ships, 3 Power generation technologies via summarizing the most common and promising systems.

A hybrid energy system (HES) including hydrogen fuel cell systems (FCS) and a lithium-ion (Li-ion) battery energy storage system (ESS) is established for hydrogen fuel cell ships to follow fast ...

EMS is tasked with the management, allocation, and regulation of power on multi-energy ships, as well as the specific equipment control to achieve optimal power allocation for each energy source in order to meet ship power, economic, and emission requirements (Xie et al., 2022a).The advancement of green and intelligent ships has led to the gradual ...

With the gradual promotion of the application of lithium battery power ships and the increasing battery installation, the demand for battery energy storage container is gradually increasing. This paper mainly studies the key technology of the containerized battery energy storage system, combined with the ship classification requirements and the lithium battery system safety ...

Sur - Oman is considering developing local energy storage solutions to accelerate the sultanate"s transition to renewable energy sources, according to the Minister of ...

as an energy source is solar energy, wind energy, marine energy, hydropower, biomass and biofuel. The International Energy Agency (IEA) "s annual report estimates a 13% reduction in renewable

Electric Propulsion Naval Ships with Energy Storage Modules through AFE Converters 405 or short circuit line faults. 2) Backup power supply for when the generator trips and er

MUSCAT-- A key study led by Omani scientists... Oman has an abundance of high-quality silica sand suitable for thermal energy storage. Picture for illustration only. MUSCAT-- A key study led by Omani scientists... For over 25 years, FCW has been the go-to source for news, information, and analysis.

In response to global environmental pollution and the energy-shortage problem, the International Maritime Organization (IMO) has introduced new requirements for both the Energy Efficiency Existing ...

The impacts of the battery system volume on TEU forfeiture decreases as ship capacity increases, reflecting innovations in ultra-large containership design that optimize ...

The energy storage system has the function of stabilizing fluctuations of electric energy. The intelligent control strategy mainly includes two parts: First, the ship energy storage system makes charging and discharging planning from the load forecast curve; Second, the ship's energy storage system changes the initially plan according to the real-time load curve.

Fossil fuels comprising coal, crude oil, and natural gas are non-renewable and greatly harmful to the environment. Hydrogen, on the other hand, is both sustainable and environmentally friendly.

In recent years, the severe environmental degradation and high levels of fossil fuel consumption linked to conventional ship energy systems have drawn attention to the advancement of alternative ship energy systems. Consequently, ship energy systems based on the use of an electrical microgrid are coming to the fore as an increasingly popular alternative ...

This paper proposes a novel electric propulsion system for naval ships, which consists of Active Front End (AFE) converters directly connected to battery Energy Storage Modules (ESMs). Employing the proposed AFE converters with ESMs in the power systems of naval ships can enhance the reliability and quality of the electric power. Furthermore, the fuel ...

The results of the application of a thermal energy storage system to a case study ship show that the installation of a storage tank of 1000 m³ could reduce the fuel consumption from the boilers by ...

Sur - Oman is considering developing local energy storage solutions to accelerate the sultanate's transition to renewable energy sources, according to the Minister of Energy and Minerals. H E Salim bin Nasser al Aufi said sustainable energy storage solutions will play a crucial role in achieving the sultanate's goal of generating at least 30% of power from ...

The ship.energy platform gives shipping industry stakeholders the opportunity to learn more about cleaner marine fuels and propulsion technologies and to take part in the growing debate over how shipping and the bunker sector can actively and fully participate in the marine energy transition to zero emissions.

In August 2021, one Japanese firm, PowerX, announced its intention to further innovate power storage and transmission. The company plans on building a business alliance with Imabari Shipbuilding Co., a major player in the Japanese shipbuilding, marine engineering and service industries.. Below is more information about PowerX, its plan to build a ship capable of ...

Publication of the study, titled "Silica Sand as Thermal Energy Storage for Renewable-based Hydrogen and Ammonia Production Plants", comes as Oman prepares to embark on a landmark transition ...

MoU signed to support deployment of renewable energy storage . MUSCAT, MARCH 31. A Memorandum of Understanding (MoU) signed recently by well-known Omani firm Nafath Renewable Energy with Takhzeen, a

Muscat new energy ship energy storage

100% ... 1st in MENA in renewable energy . Muscat - A new World Bank report on energy policies and regulations ranks Oman sixth in the world and ...

The energy storage system is an essential piece of equipment in a ship which can supply various kinds of shipboard loads. With the maturity of electric propulsion technology, all-electric ships have become the main trend of future ship design. In this context, instead of being mainly responsible for auxiliary loads as in the past, the energy storage system will be responsible for ...

Muscat - In the year of its 50th anniversary, Oiltanking has taken the first step in its new journey in Oman by creating ADVARIO, a carve-out company focused on growth in chemicals, gases and new energies. The new direction mirrors the company's forward-looking approach to taking a frontrunner role in the energy transition by ensuring safe and reliable ...

With rapidly increasing consumption of energy, shipping industry has imposed a huge burden on the marine environment. It is a general trend to increase the use of renewable energy on ships to ...
