If you open up the NexImage 5 camera to the full 2592 x 1944 mode you shouldn't have much of a problem finding your planet. Then you can center the planet and drop down to 640x480. The idea of using a 6 mm eyepiece to focus and then insert the camera might work. I often use the sync mode on a nearby star.

Get ready to capture the cloud bands of Jupiter, the rings of Saturn, and the Moon's craters in amazing detail! NexImage 5 works just as well in light-polluted cities as it does in dark skies. If you can see the planet in the sky, you can capture it! This integrated filter eliminates near infrared light for images with true-to-life color.

The Celestron NexImage 5 is a dedicated Solar System Imager (CCD camera) that can be used with virtually any telescope in any size or price range. The NexImage 5 takes high resolution 5 ...

Celestron NexImage 10MP - Solar System Imager . Easy to use color camera, provides live video for quick focusing; 3856 x 2764-pixel array with small pixels, provides high resolution images; Includes Celestron iCap software for image capture and export;

Celestron's NexImage 5 Solar System Imager is built on a 5MP color sensor with Micron's DigitalClarity technology to dramatically reduce image noise levels. Software automatically filters out video frames most affected by poor atmospheric conditions, leaving only the sharpest, clearest frames to be stacked and aligned into one high-quality image. View and capture live video on ...

Celestron NexImage 5 Solar System Imager additional information: Simply point your telescope at the Moon or a planet and record a quick video. The included software analyzes each frame of video, throws away the fuzzy ones, and perfectly aligns the remaining images. The result is a bright, clear image with the maximum amount of color and detail.

The NexImage 5 Solar System Imager (5MP) from Celestron is a 5 megapixel color sensor that not only allows you to capture still images of your celestial subjects on a computer but also ...

So I'm still looking at a camera to get into planetary imaging when I came across Celestron NexImage 5 Solar System Imager so I was wondering how this compares to something like the ZWO ASI 224MC USB 3.0 Colour Camera. Also would either of these be suitable for my 8" sct Edited August 20, 2020 by lee g Unfinished

The Celestron NexImage 5 is a versatile entry-level planetary camera, capable of taking high-resolution colour video of the Moon and planets. This video is then split into separate frames ...

Review of the Celestron Neximage 10 imaging camera - posted in Beginning Deep Sky Imaging: Background: I've been an amateur astronomer since 1993 and have spent the vast amount of these past years being a visual astronomer. My first scope was a standard 60mm Meade refractor, then the typical aperture-fever hit with a progression of a 6" Starfinder EQ, a ...
