Falcon Flywheels is an early-stage startup developing flywheel energy storage for electricity grids around the world. The rapid fluctuation of wind and solar power with demand for electricity creates a need for energy storage. Flywheels are an ancient concept, storing energy in the momentum of a spinning wheel.

The islands are providing a test bed for the flywheel energy storage technology. The installations in Scotland are the first time the technology has been used for a stationary application in the energy sector. Each flywheel has a 200kW capacity and a 90 x 90cm footprint. The main advantage of the flywheel is its longevity.

The operation of the electricity network has grown more complex due to the increased adoption of renewable energy resources, such as wind and solar power. Using energy storage technology can improve the stability and quality of the power grid. One such technology is flywheel energy storage systems (FESSs). Compared with other energy storage systems, ...
