

Approximately one-seventh of the world's primary energy is now sourced from renewable technologies. Note that this is based on renewable energy's share in the energy mix. Energy consumption represents the sum of electricity, transport, and heating. We look at the electricity mix later in this article.

The eleventh edition of IRENA's Renewable energy and jobs: Annual review - the fourth consecutive report produced in collaboration with the International Labour Organization (ILO) - provides the latest data and estimates of renewable energy employment globally.

This paper serves as an introduction to the virtual power purchase agreement (VPPA)--its place in the off-site renewable energy procurement market, how the VPPA works, and why VPPAs have been a popular instrument in the United States thus far. This paper is aimed at renewable energy buyers who are seeking to understand the VPPA mechanism.

These committees studied the implementation of a comprehensive renewable energy plan through energy conservation, production of on-site clean and renewable energy, procurement of off-site renewable energy to mitigate campus greenhouse gas emissions and sufficient storage of clean energy to provide the campus with energy resilience.

3 min read. Seventy-two percent of large U.S. energy users are actively pursuing renewable energy procurement. 1 The intensifying prioritization of corporate social responsibility and investments in renewable energy have prompted companies to find new ways to make a more positive impact on the environment. The options businesses have employed historically ...

If developing an on-site renewable energy project is impractical, federal agencies can purchase renewable energy from off-site renewable energy projects or purchase renewable energy certificates (RECs). Renewable energy purchases do not require project financing and can help an agency meet its renewable energy goals.

Off-site Renewables This video is an excerpt from a series of peer exchanges hosted by the Advanced Manufacturing Office and the Better Buildings Better Plants Low Carbon Pilot. Take a deeper look at understanding the impact of Renewable Electric Energy, the supply options for Green Power, and Cummins' initiatives to reduce greenhouse emissions.

For many people, powering their homes or small businesses using a small renewable energy system that is not connected to the electricity grid -- called a stand-alone system -- makes economic sense and appeals to their environmental values. In remote locations, stand-alone systems can be more cost-effective than extending a power line to the ...

Offsite renewable energy

Not only are you using renewable electricity, but you're telling the market to add more energy from renewable sources into the electricity grid to cover your use. "Of the over 180 GreenPower-accredited generators around Australia, there are 50 located in regional NSW," Stock says.

Power purchase agreements (PPAs) with off-site renewable energy generators have mainly been used by large non-residential customers who want to engage with green power projects directly. The prices in this section are illustrative and solely reflect PPAs that utilities and electricity providers have signed that bundle the sale of both ...

The concept of a Net Zero Energy Building (Net ZEB) encompasses two options of supplying renewable energy, which can offset energy use of a building, in particular on-site or off-site renewable energy supply. Currently, the on-site options are much more popular than the off-site; however, taking into consideration the limited area of roof and/or facade, primarily in the ...

Renewable Energy Strategies for Real Estate ULI Greenprint Guidance Document This report aims to help real estate practitioners understand the business case for renewables, the strategy for how decide on and execute both on- (owned and leased) and off-site renewable energy deals, and includes multiple global project profiles.

At least 29 U.S. states have set renewable portfolio standards--policies that mandate a certain percentage of energy from renewable sources, More than 100 cities worldwide now boast at least 70 ...

Renewable energy (or green energy) is energy from renewable natural resources that are replenished on a human timescale. The most widely used renewable energy types are solar energy, wind power, and hydropower. Bioenergy and geothermal power are also significant in some countries.

The guide highlights examples of successful on-site renewable installations from across the United States to demonstrate how these technologies can help meet the diverse energy needs of communities of different sizes, governance structures, and locations. On-Site Renewable Energy Generation (pdf) (2.58 MB)

Further, we focus on off-site renewable energy procurement (i.e., procurement from generators not located at the buyer's premises), which represents more than 90% of corporate renewable energy procurement (according to data described in Section 2). Finally, for the purposes of this paper, the term renewable energy refers exclusively to variable ...
