

Kosovo will be the first country in the Balkan region to invest in a 170 MW battery storage system which will stabilise energy fluctuations by addressing imbalances between supply and consumption. This project will be funded by the US-led Millennium Challenge Corporation (MCC), which will allocate EUR 200m, and procurement procedures should ...

key vulnerability of Kosovo's energy system is the vast reliance on the two old lignite-fired thermal power plants for generation. Thus, this high reliance on lignite power plants makes the energy system unflexible, leading to unstable security of supply, unreliable, and dependent on imports, despite the regular restorations.

Recently, Kosovo's power grid (energy network) has finally emerged from the regulatory bloc with Serbia, Montenegro and northern Macedonia, which means that Kosovo will henceforth control its energy borders, operating as an independent regulatory zone within the Kosovo-Albania bloc.

PRISTINA, March 23 (Reuters) - Kosovo's government said on Wednesday it will build a battery storage facility with capacity of 200 MWh in to help cope with the country's energy crisis.

Installing a 340 MWh battery storage facility in Kosovo will positively impact the country's energy sector by reducing the country's dependence on imported electricity, including increased...

Taken together, the projects announced to date in Kosovo would bring a total of roughly 666MW of wind power and 799MW of solar power online, pushing Kosovo to nearly 1.500 MW of installed renewable energy capacity, and thereby substantially exceeding the country's total installed coal-fired capacity.¹¹.

Kosovo intends to build the first battery energy storage system (BESS) in the region, which will have 170 MW of capacity and come online in 2028, a senior government policy advisor told Montel on Thursday.

Integrating Kosovo into the south-eastern European electricity market is helping to provide a more steady power supply throughout the region. Germany is working closely with the EU on this. Among other things, Germany provided support for the construction of a power transmission line between Kosovo and neighbouring Albania.

In order to meet the growing demand for energy, reduce power outages, and lower greenhouse gas (GHG) emissions, the Government of Kosovo is rehabilitating the Kosovo B power plant - which is more than 30 years old - to bring it into compliance with relevant European Union Directives, and to build a new, more efficient, lignite-fired power ...
