

Metal-halide based perovskite solar cells have rapidly emerged as a promising alternative to traditional inorganic and thin-film photovoltaics. Although charge transport layers are used on either side of perovskite absorber layers to extract photogenerated electrons and holes, the time scales for charge extraction and recombination are poorly understood. Ideal charge ...

The high luminescence efficiency of metal halide perovskites was recognized early on [1]. At present, the best perovskite solar cells have an EQE of 1-4% [3], and photon recycling has been suggested ...

Device optimization strategies for wide-gap perovskite PV (PPV) materials and associated interlayers as used in single-junction or tandem solar cells offer a promising starting point for IPV applications and a substantial amount of existing knowledge is at hand to be readily employed to perovskite IPV's.

Shallow defects drive slow recombination, high efficiency in perovskite solar cells. ... Perovskite solar cells reach new milestones for stability and efficiency. The researchers hope that their work will change the way that recombination in perovskite films and devices is analysed. "We see our study as a contribution to the idea of ...

Surface passivation has been developed as an effective strategy to reduce trap-state density and suppress non-radiation recombination process in perovskite solar cells. However, passivation agents ...

Non-radiative recombination losses hinder the performance of perovskite solar cells, preventing them from reaching the Shockley-Queisser limit. This Review systematically analyses the origin and ...

Perovskite photovoltaics: Slow recombination unveiled. Jacques-E Moser Institute of Chemical Sciences & Engineering of the EPFL Polytechnique F&D;ale de Lausanne, CH ...

One of the most salient features of hybrid lead halide perovskites is the extended lifetime of their photogenerated charge carriers. This property has now been shown experimentally to ...

1 Introduction. The combination of ease of fabrication [1] with outstanding electronic properties [2] has made lead-halide perovskites an extremely popular research topic for applications in photovoltaics and optoelectronics. [3] The most remarkable feature of this material class is the relatively low share of non-radiative recombination, which manifests experimentally ...

Perovskite photovoltaics: Slow recombination unveiled. ... Perovskite solar cells recycle photons  
Inorganic-organic perovskite solar cells are very efficient in part because the charge carriers ...

Perovskite solar cells (PSCs) presently attain high power conversion efficiencies (PCE) and show the potential for low-cost fabrication, positioning them as one of the leading candidates for the ...

Organic-inorganic hybrid perovskite solar cells (PSCs) have recently made great progress in reaching a certified power conversion efficiency (PCE) of 25.5% because of the collective efforts in composition engineering, crystallization control, and defect management of perovskite materials (1-5). To achieve highly efficient solar cells, it is critical to control low trap ...

Organic-inorganic halide perovskites, e.g., methylammonium lead iodide ( $\text{CH}_3\text{NH}_3\text{PbI}_3$ , or MAPI), have emerged as low-cost, high-performing materials for solar cells exceeding 20% ( $\eta$ ), along with light-emitting (2, 3) and lasing devices (4, 5). The performance of perovskite solar cells has seen tremendous improvements within a few years, primarily driven by ...

This review summarizes the challenges in the industrialization of perovskite solar cells (PSCs), encompassing technological limitations, multi-scenario applications, and sustainable development ...

The practical implementation of multijunction solar cells (MJSCs) utilizing III-V materials have achieved great success in the past. [1] Under 1 sun illumination, LG Electronics and Sharp Corporation have demonstrated monolithic two-terminal MJSC devices using 2-junction ( $\text{InGaP/GaAs}$ ) and 3-junction ( $\text{InGaP/GaAs/InGaAs}$ ) absorber layers to attain power ...

Significant developments in almost all aspects of perovskite solar cells and discoveries of interesting and noteworthy properties of such hybrid perovskites have occurred in recent times. This first chapter gives an overview of the perovskite-based photovoltaics and optoelectronics, describing the fundamentals, recent research progress, present ...

Trap-assisted recombination, despite being lower as compared with traditional inorganic solar cells, is still the dominant recombination mechanism in perovskite solar cells (PSCs) and limits their efficiency. We investigate the attributes of the primary trap-assisted recombination channels (grain boundaries and interfaces) and their correlation to defect ions ...

Concerted efforts in the development of perovskite solar cells have led to high photovoltaic and electroluminescent power conversion ... We have shown earlier that cells comprising PTAA and C 60 CTLs exhibit a slow enough recombination at the internal interfaces to not cause a significant bending of the QFLS of the majority carriers near the ...

To verify the incorporation of  $\text{In}^{3+}$ , we performed high-resolution X-ray photoelectron spectroscopy (XPS) of the perovskite films. Figure 1e shows that the binding energy of the  $\text{I} 3d$  of  $\text{In}^{3+}$ -incorporated perovskite thin films exhibited two main peaks located at 630.8 and 619.4 eV, whereas that of the control film showed peaks

at 630.6 and 619.1 eV, ...

1 Introduction. The remarkable progress of perovskite solar cells in recent years has brought certified device efficiencies to  $\sim 26\%$  - within one percent of the silicon record. [1] Comparing record device parameters to the detailed balance (DB) limit, successful mitigation of the remaining losses should primarily proceed via further carrier management improvements ...

Slow radiative recombination due to a slightly indirect band gap has been proposed to explain the high efficiency of lead-halide perovskite solar cells. In this work, we calculate the radiative recombination rate from first principles for the prototypical lead-halide perovskite,  $\text{MAPbI}_3$  ( $\text{MA}=\text{CH}_3\text{NH}_2$ ). Since the structure is dynamic, with the ...

Wide-bandgap (WBG) perovskite solar cells (PSCs) are employed as top cells of tandem cells to break through the theoretical limits of single-junction photovoltaic devices. However, WBG PSCs ...

solution-processed solar cells based on perovskite layers has increased rapidly from an initial promising value of  $9\%$  [1] to now more than  $22\%$  [3]. In addition, the open-circuit voltage for perovskite cells

The room temperature-formed non-perovskite phases of  $\text{FAPbI}_3$  and  $\text{CsPbI}_3$  can be converted into perovskite phase by the annealing process at a temperature higher than  $150^\circ\text{C}$  and  $335^\circ\text{C}$ , respectively [1]. As reported previously [46, 47], pristine  $\text{FAPbI}_3$  thin films annealed at high temperatures exhibited a black  $\alpha$ -phase that absorbed long-wavelength light.

This property has now been shown experimentally to originate from a slow, thermally activated recombination process. Moser, Jacques-E. ... English Fran&#231;ais login; Perovskite photovoltaics: Slow recombination unveiled Moser, Jacques-E. 2017 Download ... Title Perovskite photovoltaics: Slow recombination unveiled. Author(s ...

One of the most salient features of hybrid lead halide perovskites is the extended lifetime of their photogenerated charge carriers. This property has now been shown experimentally to originate from a slow, thermally activated recombination process.

Interface-induced nonradiative recombination losses at the perovskite/electron transport layer (ETL) are an impediment to improving the efficiency and stability of inverted (p-i-n) perovskite solar cells (PSCs). Tridecafluorohexane-1-sulfonic acid potassium (TFHSP) is employed as a multifunctional dipole molecule to modify the perovskite surface.

1 day ago&#0183; The energy disorders in the lateral direction of the junction in large-area photovoltaic modules are largely overlooked. Here, authors employ organic amidinium passivators to suppress the micro ...
