The ZHR value refers to the Zenithal Hourly Rate, i.e. the average number of meteors an individual observer could see in an hour, assuming perfectly dark sky conditions. This number is an estimate, the number an observer could see in real conditions depends on the actual intensity of the shower (which can be highly variable) and on the sky conditions.

Deutsch. AstroViewer. Your night sky map on the internet. Night Sky; AstroViewer 3.1.6; Find planets and constellations in the night sky.
