The ratio between energy output and energy input of a battery is the energy efficiency. (Energy efficiency reflects the ratio between reversible energy, which relates to reversible redox reaction in electrochemical research, and the total battery energy. Most batteries have <~95% energy efficiency in one charge/discharge cycle.

battery pack is then assembled by connecting modules together, again either in series or parallel. o Battery Classifications - Not all batteries are created equal, even batteries of the same chemistry. The main trade-off in battery development is between power and energy: batteries can be either high-power or high-energy, but not both.
