From a personal cost-benefit analysis, I just don't see the allure of the Solar Panel. I'd like a moon roof very much, but don't want to be saddled with the de facto, say \$1000, extra cost of the Solar Panel. If the Solar Panel were offered as a separate option for \$1000, I doubt that many people, even here, would buy it.

Today, I might use a buck boost converter coming from the solar panel to keep the voltage up on this cloudy day. I would add more solar panels but don't have the parts right now. Note: Lasersaber's SOLN1-2000 should be able to recharge an electric vehicle because it generates 2000 watts and the prime takes 1400 watts.

I'm getting solar panels installed, but without a battery (they offered one, but it's now back-ordered for a year). It costs me about \$30/mo to charge the Prius Prime. Solar won't drop that at all if I end up charging it at night w/o a battery. (Well, maybe \$1/mo.) So I'm curious about a dedicated setup just for the car. #1 ...
