What is solar water heater maintenance?

Solar water heater maintenance involves inspecting and servicing the system components regularly to ensure they're working efficiently. Activities may include checking the system's components like the storage tanks, valves, pipes, and pumps, monitoring the system's performance, and cleaning and repairing or replacing parts when required.

How often should a solar water heater be serviced?

It is recommended that a professional should do a detailed maintenance check every 3-5 years. Regular servicing of your solar water heater can save you from costly system breakdowns, prolonging your system's lifespan. It also helps maintain the unit's efficiency, potentially saving you large sums on your energy bills.

Do solar water heaters need a full solar system?

Solar water heaters harness the sun's abundant energy to provide hot water for your home. They're an eco-friendly and cost-effective solution offered by many of the top solar companies, and they don't require a full solar system to function.

Do solar water heaters need a backup heating system?

Backup heating system: Solar water heaters may require a backup heating system, especially during prolonged periods of low sunlight or high hot water demand. A technician may suggest an extra gas or electric water heater backup system to ensure a continuous hot water supply.

I installed my solar hot water system about six years ago. It's a good system. I have two 4"x8" AE-32 flat-plate collectors (manufactured by Alternate Energy Technologies), a Superstor Ultra stainless-steel tank (at 80 gallons, it's a little small, but it's what I could afford), and an El Sid DC pump from Ivan Labs. Since I installed the equipment myself, it cost ...
