# CPM Conveyor solution

## Ship to shore power systems

What is a shore-to-ship power system?

Onboard, the shore-to-ship power equipment is fully integrated with the ship's electrical and automation system, enabling seamless power transfer from onboard generation to shore power. Why Hitachi Energy? Hitachi Energy delivered the first shore-to-ship power solution to the Swedish port of Gothenburg in 2000

#### What are shore power solutions?

Our shore power solutions are taking the shipping industry to a new level of energy efficiency, while ensuring compliance with the strictest emissions regulations. We provide state-of-the-art technologies for both existing ships, and new-build container and bulk vessels.

#### Do cruise ships require a shore power supply?

According to international standard (ISO/IEC/IEEC 80005-1), cruise vessels must be connected to an electrical supply from the shoreat either 6.6kV or 11kV up to 20 MVA. Cavotec's shore power solutions cater to a wide range of cruise ship configurations, regardless of their electrical requirements and connection points.

#### What is a shore power connection?

shore power connection. All these terms are typically used for IEC-80005 standardized plug solutions (IEEE SA - IEEE/IEC 80005-1-2019 most used in the High Voltage version), which ensure that the vessel will be able to get shore power in any commercial port. How does shore power work?

#### What is a shore power vessel & how does it work?

These vessels are capable of making use of normal grid voltage and frequency, and replace the energy from the generators with the shore power with only marginal investments. For the larger vessels with higher power requirements (100 kW up to 10 to 15 MW) it gets a bit more complicated.

#### Do all vessel charging systems have the same set up onshore?

All vessel charging systems have the same set up onshorelike Alternative Marine Power, which includes more than just the cable handling system - the visible part that connects power to the ship. Why shore power?

Military Ship-to-Shore Power ESL manufactures safety-interlocked cord connected power solutions for military vessels and is known as best-in-class builders of Ship-to-Shore Power Mounds. For over 20 years, ESL has worked with customers globally to build custom engineered solutions for military applications such as: Navy/NATO Ships & Bases, USCG Ships & Bases, ...

electrical power to the shore. This again assumes generation capacity to match the ship as a load and also assumes this capacity is above that required to power the ship and its power plant. What if more power is needed? More ships could be used, but there is also more power onboard each ship. This other power is the power for propulsion.

## Ship to shore power systems

"Shore to Ship" (STS)--A universal system for the connection of the ship"s electrical power network with the on-shore network--ensures the adoption of the voltage and frequency of the on ...

Wabtec is the market-leading producer of shore-to-ship cable management systems (CMS) for onshore power supply solutions (OPS). ShoreCONNECT is the interface between the harbor"s power-supply architecture, such as a local substation, and any kind of vessel, including cruise, container, OSV, PSV, ferries, RoPax, RoRo, car and bulk carriers.

Decentralized Shore Power architectures provide an island type layout and an inherent redundancy within the overall power system. Compatibility with GE's SeaGreen Ship-to-Shore connections. MV Solution LV Solution Shipyards may require AFE configuration in order to run power tests on diesel engines and release energy into the grid. Input ...

Infrastructure Malta has completed a transformative project that introduces shore-to-ship electricity systems for cruise liners visiting Malta. This initiative promises to slash 90% of air pollution in the Grand Harbour. The investment, facilitated by the European Union's Connecting Europe Facility, seeks to provide onshore power supply along specific quays ...

SIHARBOR is an innovative shore connection system for berthed ships, providing fast and flexible connection via a cable management system. eco friendly port ... SIHARBOR provides a fast, simple and flexible connection to the ship via a cable management system. Download : Sustainable power supply for eco-friendly ports. With the SIHARBOR shore ...

Shore Power for Cruise terminals. As per international standard (ISO/IEC/IEEC 80005-1), cruise vessels must be connected to an electrical supply from the shore, at either 6.6kV or 11kV up to 20 MVA. Cavotec's shore power solutions meet a broad variety of cruise ship configurations, regardless of their electrical requirements and connection ...

A complete electro-magnetic dynamic model of the high voltage shore connection and of the on-board power system has been developed, including frequency converter, shore-side transformer, connection MV cables and power system of the ship, to analyze in detail the behavior of the system in case of single phase-to-ground fault and three-phase short circuit.

Ensuring shore power is "ship shape" Adapting substations to facilitate "cold ironing" or connecting an ocean-going ship to shore power while in port originated with the cruise line industry. In 2005, Princess Cruises was looking for a partner to build a ...

Shore power is also known as cold ironing, SSE (Shore Side Electricity), high voltage shore connection (HVSC), onshore power supply (OPS) and Alternative Maritime Power (AMP). All these terms describe the same process: the connection of ships in port electrical grid in order to power onboard services, systems and

## Ship to shore power systems

It is likely that similar legislation will soon be more common worldwide, making a shore power connection essential on board. 3. Standards are already in place for ship to shore power. It's easier to use a shore power connection when most ports have a standardised system.

After all, shore power allows a ship to turn off the auxiliary engines, which would normally provide the electricity the vessel needs while at berth. ... California"s Port of Hueneme suffered a rain and flooding event in December 2023 that caused extensive damage to its shore power system, leaving the infrastructure beyond repair.

In addition to the deployment of shore power technology in the commercial sector, shore power has been successfully used by the U.S. Navy for decades and is included in the Navy"s Incentivized Shipboard Energy Conservation program. Shore power can be most effective when applied at ports with a high percentage of frequently returning vessels.

For ship-to-shore systems, only a few minor customizations are required to provide a full range of power quality and usage reports for the ship and operator billing requirements. Ensuring shore ...

shore to power a ship"s systems when it is in port. When it is cruising, a ship"s main engines drive an auxiliary power generator. As the ship begins maneuvering to enter a port, the main engines slow down and no longer drive the generator. An auxiliary generator is then switched on to supply electricity. Once the ship docks, the main ...

In some countries 50/60Hz conversion is necessary as most of the ships (especially passengers ships) have a 60Hz distribution system. Our shore-to-ship solutions, with either rotating or static frequency converter systems, are green solutions that permit the use of alternative power systems allowing energy to be supplied from the wharf so that ...

AKA"s shore power systems are customizable to allow for a wide range of voltages and power requirements to suit your vessels" need for shore power. It can also accommodate for frequency conversion where the shore power supply frequency is different from that of the ship"s network.

Make a business case for a container ship refit to shore power. ... This standard categorically divides shore power plugs and sockets into low voltage shore connection systems (LVSC < 1 MVA) and high voltage shore connection systems (HVSC &gt; 1 MVA). LVSC systems are governed by IEC/IEEE 80005-3 for operability and IEC 60309-5 for dimensions.

Wärtsilä"s alternative maritime power solutions are available as built-in shore-side systems or deck-mounted containerised systems. They have been designed according to the IEC 80005 standard for high-voltage shore connection systems. The standard applies to container ships, cruise ships, RoRo cargo

### Ship to shore power systems

ships, LNG carriers and tankers.

A shore power (SP) system consists of three parts: a shore-side power supply system, a shore-ship connecting system, and a ship-borne power receiving system (Chen et al., 2019). The shore-side power system is located at a terminal. It receives electricity from the local power grid and then converts the electricity to voltages and frequency ...

A novel approach to synchronization of shore and ship power systems is presented in this paper, providing a blackout-free supply from the shore. An application of the shore-to-ship synchronization strategy, proposed in the paper, instead of the commonly used ship-to-shore synchronization, enables a fuller exploitation of the high dynamic offered by ...

A shore power (SP) system consists of three parts: a shore-side power supply system, a shore-ship connecting system, and a ship-borne power receiving system (Chen et al., 2019). The shore-side ...

Shore power for ships. Take charge of future-proofing vessels for a competitive edge. Our shore power solutions are taking the shipping industry to a new level of energy efficiency, while ...

Shore-to-ship power is a mature technology, with the number of berths and ships with shore-to-ship capabilities increasing. Yet, several barriers impair market uptake of shore-to-ship power: ... renewable solutions such as concentrated solar heat and solar cooling systems; and solutions to improve energy efficiency such as building energy ...
