Each hydraulic thruster model has a number of options for motor sizing. This is to better match the available pressure and flow of existing systems or to give greater flexibility when

designing complete ...

A power system stabilizer (PSS) is a control system integrated into the control structure of specific generation units within AC grids. It monitors current, voltage, and machine shaft speed. Analysing these variables, the PSS generates appropriate control signals to the voltage regulator unit, aiming to damp system oscillations.

Sleipner, formerly known as Side-Power, offers a wide range of thruster controls and accessories. All on/off DC thrusters and on/off hydraulic thrusters use the 4-wire or 5-wire control system. All proportional DC, AC, and proportional hydraulic systems use the S-Link control system.
