

A better solution is a battery and an inverter which outputs 210v AC from a battery input. However you can buy power banks which have a battery, a mains charger and an inverter built-in - they are popular with campers etc - these can cost a few hundred pounds and come with varying capacity and you could power other appliances from them as well..

5kw LiFePO4 48v battery. As with the last one I've ordered from SJY, it doesn't initially give you the full 5kwh/100 amp hours promised. I suspect, the cells are poorly balanced. But after a few charge/discharge cycles, this seems to improve. The digital coulomb meter built into the battery is quite handy. I wouldn't buy a battery without one now.

My battery was "allowed" to go dead, and when I jumped the car (improperly it would seem!!) I
