Out of all the renewable energy produced in the U.S. in 2019, 24% came from wind, while 9% came from solar power. Utilities and large-scale operations heavily utilize wind energy, while homeowners prefer solar energy. The primary benefit of wind over solar power for your home is that wind turbines aren't dependent on sunlight.

The pressing challenge of climate change necessitates a rapid transition from fossil fuel-based energy systems to renewable energy solutions. While significant progress has been made in the development and deployment of renewable technologies such as solar and wind energy, these standalone systems come with their own set of limitations.

Solar and wind energy company

Solar stocks have a lot of long-term potential in the age of climate change. Currently, less than 4% of all U.S. power generation comes from solar, so there's plenty of room for growth in the ...
