

What is a solar diverter?

A solar diverter is a control that compares whole-house power consumption with the power produced by a PV system. When PV output exceeds on-site power usage, the controller (5) sends the excess PV power to the home's water heater (6) instead of feeding the power to the electricity grid.

Do you need a solar power diverter?

With the high upfront cost of solar panels, a solar power diverter makes sure you get the most out of your solar power, so you don't have to rely on the grid as much for heating water. But bear in mind that it's only useful if you've got an immersion heater. If you have no means of heating your water with electricity, a diverter will be useless.

Does a solar power diverter work with a water heater?

A solar power diverter only works with electric water heaters, so it's not useful if you can't use electricity to heat your water. And like other solar components, it has a finite lifespan and will need to be replaced after around 12 years. Obviously, you need enough solar generation for a solar power diverter to be effective.

Is a solar diverter a good fit for my home?

For a solar diverter to be a good fit for your home, you must have on-site power generation, like solar PV panels or a wind turbine - and your system should regularly produce more electricity than your household consumes, otherwise there won't be excess electricity available to divert to your water heater.

Are solar power diverters cost-effective?

Lastly, while diverters are cost-effective, they don't offer the same level of financial savings or energy independence as solar battery storage systems, which are a lot more flexible and can store excess electricity for use at any time of the day or night. How much does a solar power diverter cost?

How much does a solar power diverter save a year?

Typical savings of \$800 - \$1500 each year *depending on how much hot water you use No more sending your valuable solar power back to the grid for a pittance. Power diverter will always maximise the usage of your solar power and maximise your savings. **CALCULATE YOUR SAVINGS** Or Call Now to speak to one of the team on - You Saved \$285 This Quarter

The article below, written by Scott Young of CATCH Power, provides a look into the world of hot water diverters, which use excess solar energy to drive the element in electric storage-based water heaters. Hot water diverters are a great way to increase solar self-consumption and are significantly more affordable (albeit less versatile) than battery storage at this point in time.

Calculate payback period for installing a solar diverter on your PV system. Solar Diverter Calculator Version

Solar energy diverter

1.1.0 Although best efforts have been taken to ensure accuracy, this utility may contain errors. Therefore, no warranty is provided. ... Here we determine how much revenue would be achieved if the solar energy used for heating water was ...

As well as having our excellent technical support team on hand to answer any of your questions and queries, eddi solar diverter also comes with a 3-year warranty. Once your myenergi eddi has been installed, please register your individual products to take full advantage of the 3 year warranty support.

Expert installation of solar power diverters in the UK. We design, supply, and install energy-efficient heating solutions for homes and businesses. Contact us today. ... Battery storage allows homeowners to store excess energy from renewable sources, such as solar panels, enabling them to rely less on the grid. ...

MyEnergi's Eddi is called a solar power diverter, but in reality it's a bit more flexible than that. A smallish metal box, it connects between your fuse board and an immersion heater, ...

The SunMate is an innovative renewable energy management product that will use all the surplus power generated by your solar power to produce hot water. Every unit of power used to heat the hot water in this way reduces imported energy by the same amount, resulting in a significant saving in imported energy costs.

Diverters Allow Solar Energy To Be Stored As Heat. If you know what a solar hot water diverter is, there is a good chance you've heard they allow your hot water system to work as a battery. This isn't true. Batteries and hot water systems are completely different things. With batteries electricity goes in and electricity comes out.

Designed to maximize self-consumption and reduce energy bills by automatically diverting excess PV energy to power the home's water heater. ... Enables prioritizing excess solar power to go to the Hot Water Controller before other devices; Includes a built-in appliance consumption meter and an optional temperature sensor;

Charge your car with grid, wind or solar energy. eddi. Divert self generated power back into your home. eddi+. The 3-phase solar power diverter. libbi. Libbi is a modular battery storage system that adapts to your needs. harvi. Save time, money and unsightly wiring. app. Manage and monitor your energy from anywhere. Accessories. Extended ...

Charge your car with grid, wind or solar energy. eddi. Divert self-generated power back into your home. eddi+. The 3-phase solar power diverter. libbi. Libbi is a modular battery storage system that adapts to your needs. harvi. Save time, money & unsightly wiring. extras. Extended warranty, parts, education & more. merch. Kit yourself out in ...

By employing a solar energy diverter, homeowners or businesses can make the most of their solar power systems, ensuring that a higher proportion of the generated energy is utilised on-site rather than being exported to the grid. This increases self-consumption, reduces electricity bills, and enhances the overall efficiency of the solar power ...

Solar energy diverter

Solar diverters contribute to energy independence by allowing homeowners to make the most of their solar energy. This reduces dependence on utility providers and guards against fluctuating energy prices. In an era where energy security is becoming increasingly important, solar diverters offer a step towards self-sufficiency.

...

With a solar PV diverter, it's possible to use 100% of your solar energy generated; A solar PV diverter is a low-cost and maintenance-free alternative to Solar Thermal. Savings with a Solar PV Diverter. If you can supplement your energy supply with free solar energy, you'll see a significant reduction in your energy bills.

...

Power Diverters work by utilising the surplus solar energy your PV system generates and instead of letting it go back to the grid it redirects it to heat your households water tank. This means you get maximum productivity out of your solar PV system and benefit from reduced carbon footprint, low electricity bills and keep a clean and an eco ...

2 days ago; On its own, excess solar energy is unlikely to meet all your hot water needs, but it can help reduce your bills. A solar diverter switch installation could add around £800 to your installation costs. You'll need to replace your diverter after around 12 years. ...

The eddi solar diverter logs all energy saving data to enable ongoing savings by optimising usage. There is also an intelligent daylight-saving time adjustment with overload and short-circuit protection for your peace of mind. Additionally, eddi is fully compliant with worldwide power grid standards and comes with a 3-year warranty. ...

Immersion diverters (sometimes called immersion optimisers) are a clever, simple device that allows you to make the most of the energy your solar panels generate. Typically paying for themselves within 2 years, immersion diverters sense when there's more energy being generated by your Solar PV than you're using in the property.

The Solar iBoost+ is the UK's best-selling PV immersion controller preferred by most solar installers. It saves you money by cutting water heating costs and reducing the use of your home's boiler. Fitting a Solar iBoost maximises the consumption of the free solar energy generated at your property.

This allows the device to monitor solar PV output and any surplus energy that is exported back to the grid. Should you wish to have a PV diverter fitted as part of your solar PV installation then this will typically add around £800 to the total cost. Conclusion. A solar PV diverter is a worthy addition to any solar PV setup.

Price: The installed cost of the Blue Catch is given as \$1,700 for the single phase version and \$1,950 for the 3 phase version. Phases: Single phase or 3 phase. Sensor Connection: Wired connection from the meter sensor

Solar energy diverter

to the diverter with a wireless connection to its communicator which plugs in to your modem or router. Grid Power Boost: The Blue Catch ...

It takes a lot of electricity to heat water, and this can result in high bills. Thankfully though, there's a solution: solar panel power diverters. A solar panel power diverter takes surplus solar electricity and sends it to your immersion heater. Heated water can then be stored for many hours until it's needed.
