Solar Energy and People Since sunlight only shines for about half of the day in most parts of the world, solar energy technologies have to include methods of storing the energy during dark hours. Thermal mass systems use paraffin wax or various forms of salt to store the energy in the form of heat.

Solar energy will help you save on your monthly electricity bills and combat climate change, but what needs to happen to get those solar panels on your roof? Along with understanding the solar installation process, being familiar with your individual circumstances, like the age of your roof, can help you be a more informed solar consumer.

Anyone who uses energy--energy consumers--can take advantage of solar energy to power their lives. These resources, compiled by the U.S. Department of Energy Solar Energy Technologies Office (SETO), cover a wide variety of topics, from the process of choosing and installing a solar energy system, to understanding how it impacts the value of a home.
