

What is a solar power inverter? How does it work? A solar inverter is really a converter, though the rules of physics say otherwise. A solar power inverter converts or inverts the direct current (DC) energy produced by a solar panel into Alternate Current (AC.) Most homes use AC rather than DC energy. DC energy is not safe to use in homes.

The downside of this solar panel inverter installation system is that it doesn't contain a battery so in case of a power outage there won't be a power backup to power a building. Hybrid system This type of solar panel inverter installation system is the most expensive as they offer the benefits of both a Stand-alone system and a Grid-tie system.
