Solar power plants are systems that use solar energy to generate electricity. They can be classified into two main types: photovoltaic (PV) power plants and concentrated solar power (CSP) plants. Photovoltaic power plants convert sunlight directly into electricity using solar cells, while concentrated solar power plants use mirrors or lenses...

A solar photovoltaic (PV) system is composed of one or more solar panels combined with an inverter and other electrical and mechanical hardware that use energy from the Sun to generate electricity. PV systems can vary greatly in size from small rooftop or portable systems to massive utility-scale generation plants

"An inverter will never generate power; the power is generated by a DC source and inverter only converts to A". In a solar plant, the DC source is the DC power from PV arrays which are formed by connecting solar Modules in series. The output from PV array comes as positive and negative cable, they are together called as a String.
