install. The boiler should be sized to within 25% of the actual heat loss of the structure. Over sizing will result in short cycling and inefficient operation. 6. When moving the boiler, do not push against the jacket or burner. Damage will result. 7. If the boiler is vented to a chimney, be certain the chimney is clean and free of obstructions.

For the energy system in the future, coal-fired power plants (CFPPs) would transfer from the base load to the grid peak-shaving resource [6]. However, the power load rate of the CFPPs usually cannot fall below 30 % of the rated load (i.e., 30 % THA, THA: thermal heat acceptance condition) due to the limitation from the ability of steady-state combustion on the ...
