Also, an increase in the charging rate induces an increase in the charging time and a decrease in the discharging time. In addition, the higher the charge rate, the more idle time the battery would experience, making it less efficient for long-term energy storage needs. The higher the battery size, the lower the idle time to start with.

Understanding Idle vs. Productive Time. Idle time refers to periods when an individual is not engaged in productive or meaningful tasks. It is often considered unproductive or wasted time because it does not contribute to achieving goals or generating value. During idle time, individuals may be idle for various reasons, such as: Distractions

When the system is discharged, the air is reheated through that thermal energy storage before it goes into a turbine and the generator.
