What is long duration energy storage (LDEs)?

Long duration energy storage (LDES) generally refers to any form of technology that can store energy for multiple hours, days, even weeks or months, and then provide that energy when and if needed. It is a technology that is essential if the world is to increase the proportion of renewable energy, given it is an inherently intermittent source.

What are the different types of energy storage technologies?

Other similar technologies include the use of excess energy to compress and store air, then release it to turn generator turbines. Alternatively, there are electrochemical technologies, such as vanadium flow batteries.
