In recent years, software update has become one of the essential functions in the current Internet to maintain devices safe from a various types of attacks. If the number of software users is enormous, distribution servers tend to be bottlenecks, due to the access concentration. To alleviate this problem, several systems (e.g., Windows update) have started applying peer-to ...

Tit-for-tat works well in practice in many cases, but there's no reason it has to. When Axelrod had his famous contest, the first time he said there would be exactly 20 rounds. No doubt he was aware of the centipede argument, but not all the players were, and the centipede argument only holds true if everyone believes it.

Tit for tat is a reciprocal retaliation, a response equal in severity to the original injury. Both tit and tat literally refer to light blows or strokes. So, tit for tat is literally an equal exchange of blows. The terms and their association with one another date to the mid fifteenth century, and the idiom, in its familiar form of tit for tat, comes along a century later.
