The SUMPRODUCT function returns the sum of the products of corresponding ranges or arrays. The default operation is multiplication, but addition, subtraction, and division are also possible. In this example, we"ll use SUMPRODUCT to return the total sales for a given item and size:

You can automatically calculate subtotals and grand totals in a list for a column by using the Subtotal command. Important: Subtotals are not supported in Excel tables. The Subtotal command will appear grayed out if you are working with an Excel table.

You can use a simple formula to sum numbers in a range (a group of cells), but the SUM function is easier to use when you"re working with more than a few numbers. For example =SUM (A2:A6) is less likely to have typing errors than =A2+A3+A4+A5+A6.

Use Excel as your calculator. Instead of using a calculator, use Microsoft Excel to do the math! You can enter simple formulas to add, divide, multiply, and subtract two or more numeric values. Or use the AutoSum feature to quickly total a series of values without entering them manually in ...
