Since humans first used solar energy to power satellites in 1958, the use of solar arrays in space became possible [2] 1968, Peter Glaser first proposed the concept of a space solar power station (SSPS) [3]. The basic idea is to set up an SSPS in a geosynchronous orbit (GEO) or sun-synchronous orbit, collect solar energy using concentrating or non-concentrating ...

The study first outlines concepts and basic features of the new energy power system, and then introduces three control and optimization methods of the new energy power system, including effective utilization of demand-side resources, large-scale distributed energy storage and grid integration, and source-network-load-storage integration.

China Central Television (CCTV) recently aired the documentary Cornerstones of a Great Power, which vividly describes CATL's efforts in the technological breakthrough of long-life batteries. The Jinjiang 100 MWh Energy Storage Power Station that appeared in the video is the first application of this technology. Contemporary Amperex Technology Co., Limited ...

Carbon dioxide as a working fluid has a very promising prospect for future power applications. Since the early 2000s, an extensive R& D has been ongoing both at turbomachinery [32, 33] and system levels [34] for power cycles operating with supercritical carbon dioxide (sCO<sub>2</sub>), with applications including combined cycles flexibilization [35, 36] nuclear power [37], ...
