They may look like single-use AA, AAA or other alkaline batteries or a battery pack shaped for specific tools. Removable batteries: Removable rechargeable batteries can be brought to specialized battery recyclers, participating retailers that provide battery takeback services, or local household hazardous waste collection programs .

A battery charged to its extremes, from empty to full, can make that trip 300-500 times before burning out, according to Battery University, the highly informative, if archaically organized, depot of battery tips and testing. A laptop battery charged to 80 percent might make it 850-1,500 cycles.

What is Battery Cycle Use? A battery cycle use is defined as the number of times a battery can be charged and discharged before it needs to be replaced. The average laptop battery has a lifespan of about 300-500 cycles, while high-end gaming laptops can have up to 1000 cycles. Most people will never come close to maxing out their battery cycle use.
