This type of lithium battery uses a cathode made from lithium-manganese spinel ( $\text{Li} + \text{Mn}^{3+} + \text{Mn}^{4+} + \text{O}_4$ ). Spinel is a type of mineral with a distinctive  $\text{AB}_2\text{O}_4$  structure. The spinel structure has very good thermal stability, improving the battery's safety. It also promotes ion flow within the electrolyte and lessens the internal resistance ...

Lithium-ion batteries have come a long way from their invention in the 70s and powering small gadgets and electronics in the 90s, to electrically mobilizing present-day 60-ton trucks. Government policies and company initiatives around the globe have sped up the development rate as the race to decarbonize intensifies, to the extent that lithium-ion (li-ion in ...

When you take off the top of a lithium battery pack, you'll first notice the individual cells and a circuit board of some kind. There are three types of cells that are used in lithium batteries: cylindrical, prismatic, and pouch cells. For the purpose of this blog, all cells are lithium iron phosphate ( $\text{LiFePO}_4$ ) and 3.2 volts (V).

OverviewHistoryDesignFormatsUsesPerformanceLifespanSafetyA lithium-ion or Li-ion battery is a type of rechargeable battery that uses the reversible intercalation of Li ions into electronically conducting solids to store energy. In comparison with other commercial rechargeable batteries, Li-ion batteries are characterized by higher specific energy, higher energy density, higher energy efficiency, a longer cycle life, and a longer calendar life. Also not...

Each type of lithium-ion battery has its own advantages and considerations, shaping their suitability for different electric vehicle applications.
