What is Soh in a battery?

The standard definition of SOH is the ratio of the capacity discharged from a complete state of a power battery at a specific multiplication rate from the entire state to the cut-off voltage to the nominal capacity (the actual initial capacity) to its corresponding nominal capacity under the standard conditions.

How does Soh measure battery performance?

SOH measures the capacity and performance of batteries to meet their specific functions and criteria, such as maintaining their expected capacity, voltage, and energy density levels. Lithium-ion batteries left idle may experience capacity decline due to degradation in electrode materials that slows reaction speeds, leading to performance issues.
