One type of control valve is the magnetorheological control valve [196], which uses a new intelligent material called magnetorheological fluid, as the working environment [197], [198], [199]. magnetorheological control valve with simple structure, simple operation and fast response without relative movement between parts is widely used in ...

A ball valve is a type of valve that uses a spherical perforated obstruction (a rotary ball) to stop and start the hydraulic flow. A ball valve is usually rotated 90° (quarter-turn valve) around its axis to open and close. It is one of the most widely used valve types. Ball Valves are suitable for both liquid and gas services.
