When it comes to underground tank backfill, however, the preferred material for surrounding and covering the tank is sand, gravel or a sand/gravel mixture. The most important thing to consider is how the fill material is going to interact with your underground storage tank's composition.

You can pay for additional tests which utilize heightened metal detection equipment and/or something known as "ground penetrating radar," which can help the contractor or technician better determine the size and shape of the buried object and whether it has dimensions consistent with that of an underground oil storage tank. You can also ...

I was trying to build a second tank with minimum cost. I know that playground sand is like \$10 but I'm building a 5-gallon nano aquascape for \$25(tank is \$25). I would even collect dirt from outside if possible. I watched a channel named "Father Fish" and he collected everything from nature. I...

A holding tank is exactly what it sounds like -- a large tank that receives and holds household sewage and/or wastewater. Like septic tanks, they're made of plastic, fiberglass or concrete, with a similar size and capacity range. Also like septic tanks, they connect to household sewage systems through a large diameter pipe.

About Underground Oil Tanks. Before municipalities installed natural gas lines, the furnaces in most homes used fuel oil stored in a tank. Underground oil tanks were common from the 1930s to the 1980s. Due to their size and unsightliness, as well as the risk of vandalism and theft, tanks were often buried, explains real estate attorney and investor Rajeh Saadeh.
