

Will incoming calls store energy

How can I reduce the number of incoming and outgoing calls?

Some businesses designate certain phone lines for incoming calls, and others for outgoing calls. Regular customers or patients should be given direct phone numbers so they can get right to you. This reduces the number of incoming calls the reception staff has to work with, and frees them up to give their energy to new calls.

How to check if a call is incoming or outgoing?

Call the `onScreenCall()` function for any new incoming or outgoing calls when the number is not in the user's contact list. You can check the `Call.Details` object for information about the call. Specifically, the `getCallerNumberVerificationStatus()` function includes information from the network provider about the other number.

How to ease the burden of phone calls?

If you are experiencing a busy period of phone calls, then you can designate back-up staff to ease the burden. Some companies will hire temporary workers to help with phone calls when activity spikes. Another option for easing the burden during the busy season is to hire a virtual assistant.

Is a high volume of calls a good thing?

A high volume of calls during a busy season may be a good thing. However, it could also mean having problems in handling a large volume of calls and other tasks falling to the wayside. For many companies, their phone lines are their lifelines, and missing important calls can become costly.

You can use the call waiting feature to answer incoming calls when you are already engaged in a previous call. If you cannot answer a call because your phone is faulty or the network signal is poor, you can also set call forwarding to forward calls to another number or device.
