This study focusses on the energy efficiency of compressed air storage tanks (CASTs), which are used as small-scale compressed air energy storage (CAES) and renewable energy sources (RES).

Latent heat storage systems use the reversible enthalpy change Dh_{pc} of a material (the phase change material = PCM) that undergoes a phase change to store or release energy. Fundamental to latent heat storage is the high energy density near the phase change temperature t_{pc} of the storage material. This makes PCM systems an attractive solution for ...
