

Does energy starvation induce Yap phosphorylation?

Energy-stress-induced YAP phosphorylation was also observed in myoblast C2C12, mammary epithelial MCF10A, and the cervical cancer HeLa cell lines (Supplementary Fig. 1d-f). Figure 1: Cellular energy starvation activates Lats and inhibits YAP. (a) Glucose starvation induces YAP phosphorylation.

Does cellular energy stress affect Yap and TAZ activity?

Collectively our data suggest that cellular energy stress inhibits YAP and TAZ activity. The increase of YAP Ser 127 phosphorylation indicates that Lats kinase activity is enhanced by energy stress (Fig. 1a). Phosphorylation of Ser 909 and Thr 1079 in Lats1 positively correlates with Lats activity 33,34.

Does AMPK-induced Yap inhibition suppress oncogenic transformation of lats-null cells?

AMPK-induced YAP inhibition can suppress oncogenic transformation of Lats-null cells with high YAP activity. Our study establishes a molecular mechanism and functional significance of AMPK in linking cellular energy status to the Hippo-YAP pathway.

Does AMPK phosphorylate endogenous Yap?

Moreover, the AMPK activators AICAR and metformin increased the association of endogenous YAP and AMPK (Fig. 3f). Although the precise molecular basis for the energy-stress-induced interaction between AMPK and YAP is unknown, our data suggest a direct role of AMPK in YAP phosphorylation.

Is Yap a tumour suppressor?

For instance, YAP could function as a tumour suppressor in some cell types, such as haematological cancers, by inducing apoptosis in response to DNA damage 17,18,19. Recent studies have revealed a large number of extra- and intracellular signals that modulate YAP/TAZ activity.

How does cAMP/PKA signalling affect Yap?

Kim, M. et al. cAMP/PKA signalling reinforces the LATS-YAP pathway to fully suppress YAP in response to actin cytoskeletal changes.

In this paper, we propose a dynamic energy management system (EMS) for a solar-and-energy storage-integrated charging station, taking into consideration EV charging demand, solar power generation, status of energy storage system (ESS), contract capacity, and the electricity price of EV charging in real-time to optimize economic efficiency ...

Energy stress-induced Lats activation reduces energy expenditure and cell growth, possibly by inhibiting YAP. Our study provides a mechanism of signal integration and crosstalk at YAP ...

The Journal of Energy Storage focusses on all aspects of energy storage, in particular systems integration,

electric grid integration, modelling and analysis, novel energy storage ...

The hydrogen storage properties of a ternary composite system developed from a combination of magnesium hydride (MgH_2), sodium aluminum hexahydride (Na_3AlH_6), and lithium borohydride (LiBH_4) in a molar ratio of 1:1:4 were systematically investigated. X-ray diffraction (XRD) results found that the MgH_2 - Na_3AlH_6 - LiBH_4 (1:1:4) composite was converted to ...

MITEI's three-year Future of Energy Storage study explored the role that energy storage can play in fighting climate change and in the global adoption of clean energy grids. Replacing fossil fuel-based power generation with power generation from wind and solar resources is a key strategy for decarbonizing electricity. Storage enables electricity systems to remain in... [Read more](#)

The role of vitamin D signaling in the pathogenesis of metabolic disorders is poorly understood. Freeburg et al. demonstrate that hepatocyte Vitamin D receptor (Vdr) coordinates hepatic and organismal energy metabolism in zebrafish, subject to nutritional cues, suggesting an evolutionary role for VDR as a transcriptional effector of nutrient availability.

Energy is a vital element in sustaining our modern society but the future of energy is volatile, uncertain, complex, and ambiguous; especially when facing a continuous drive to ensure a sustained and equitable access as well as mounting pressures to reduce its emissions. Traditional approaches in developing energy technologies have always been in ...

A review: Energy storage system and balancing circuits for electric vehicle application. IET Power Electronics. 2021;14: 1-13. [View Article Google Scholar](#) 9. Yap KY, Chin HH, Kleme? JJ. Solar Energy-Powered Battery Electric Vehicle charging stations: Current development and future prospect review. Renewable and Sustainable Energy Reviews ...

1 · Benefitting from these properties, the assembled all-solid-state energy storage device provides high stretchability of up to 150% strain and a capacity of 0.42 mAh cm^{-3} at a high ...

Pumped hydro storage is the most-deployed energy storage technology around the world, according to the International Energy Agency, accounting for 90% of global energy storage in 2020. 1 As of May 2023, China leads the world in operational pumped-storage capacity with 50 gigawatts (GW), representing 30% of global capacity. 2

These results suggest that adipocyte Hippo-YAP/TAZ signalling constitutes a nexus for coordinating adipose tissue lipid storage capacity and systemic energy balance through the regulation of ...

Energy-stress-induced Lats activation reduces energy expenditure and cell growth, possibly by inhibiting YAP. Our study provides a mechanism of signal integration and ...

The demand for efficient use of clean and renewable energy, as well as, the popularization of portable electronics and electric vehicles has prompted the development of energy storage materials, especially for electrochemical energy storage [17]. The use of nanomaterials for electrochemical energy storage has emerged as a promising approach [18].

About 2,600 miles northwest of Tonga, the Yap State Public Service Corporation (YSPSC) has issued an invitation to bid (ITB) for the supply and delivery of solar and energy storage minigrids systems. Yap is part of the Federated States of Micronesia and is one of 600 islands in the Caroline Islands archipelago.

Yap State Public Service Corp. is seeking bids to supply solar minigrids with battery energy storage systems (BESS), totaling 79 kW, for Yap Island in the Federated States of Micronesia.

Main. Adipose tissue is a metabolic and endocrine organ that regulates systemic energy balance 1.White fat depots store excess energy in the form of triglycerides, while they also secrete adipokines such as leptin and adiponectin to control systemic energy expenditure and food intake 1,2.The energy storage and endocrine functions of adipose tissue both contribute ...

The global energy market is more volatile and uncertain than ever. Compounded with the challenges around climate change, it is evident that secure, sustainable, and affordable energy supplies are needed to meet future energy demands. With hydrogen dominating the discussions around clean energy trans

Indeed, the highest values of energy storage obtained in this study for the composite containing three integrated EDLC interleaves are 174 mWh kg⁻¹ of energy density and 54 W kg⁻¹ of power ...

A battery-supercapacitor hybrid energy storage system is investigated as a solution to reduce the high-power delivery stress on the battery. An optimally-sized system can further enhance the storage and cost efficiency. This paper discusses several possible problems in the sizing of a battery-supercapacitor hybrid energy storage system for practical ...

The development of phase change materials (PCMs) with high energy storage density, enhanced photothermal conversion efficiency and good form-stability is essential for practical application in utilization of solar energy. Herein, novel PCM composites (CPPCMs) with extremely high energy storage density and superb

solar-thermal conversion performance were ...

YAP STATE ENERGY ACTION PLAN o The National Vision statement for Energy is o To improve the life and livelihood of all FSM citizens with affordable, reliable and environmentally sound energy. o The National Objective for Energy is o To promote the sustainable socio-economic development of FSM through the provision and utilization of cost-effective, safe, reliable and
